Rocket NextGen Academy Software Engineering Craftmanship

June 8th – July 10th

Hi Durga,

Your remote VMs are available right now. Instructor's machine is under PTACCESS900 – COMPUTER900(Durga) and it is very different from all other student VMs. Please make sure to assign IDs to the students from the list below.

What not to do.
Please let your students know not to upgrade the VM, do not activate any firewalls and do not add any alternative desktops. If they get prompted for software updates just cancel or decline them. There are few extra VMs in case any of your students will experience problem with their VMs.

New to ProTech Remote Labs? Below are links to a PowerPoint (or PDF) to use in assisting your students when connecting to our remote lab services, which includes a slide to insert your connection table below. I have also created a secondary PowerPoint & PDF, a more in-depth overview for our instructors to review so they can better support the students during class. It will break down our remote lab benefits and features, such as Remote Assistance and ProTech FTP Lab file retrieval.

Both of these PowerPoints (or Adobe Reader) files can be downloaded from the following links:
HTML 5 Remote Lab Connection PowerPoint (Use for class)
HTML 5 Remote Lab Connection PDF (Use for class)
Instructor HTML 5 Overview PowerPoint (Instructor Review)
Instructor HTML 5 Overview PDF (Instructor Review)

Please read ALL of the information below thoroughly as it contains important details about the remote lab connections.

Here is your remote connection information. Please make sure that you connect to your PC to familiarize yourself with the environment that students will be using next week. This connection is also compatible with Safari for Macs.

Using a current HTML 5 browser (Edge, IE11, Chrome, Firefox, Safari), access the remote lab computers by going to https://labs.protechtraining.com.

You will login as **PTACCESS900** for your login ID and connect to **COMPUTER900** as your host lab computer (see full credentials in the table below). Your user ID will also have connection rights to all student computers if needed. These remote connections will be available only until the scheduled ending time on the final day of training. On the final day of training, please notify us when the training has been completed so that we know when to start preparing machines for the upcoming week. If not notified, we will begin our reimaging process at the scheduled ending time on the final day.

You will have **36 Student in the class and you will have 5 extra VMs.** Assign each student a *unique* ID from the table below during the first morning, reserving **PTACCESS900** ID for yourself. You can copy the table below and insert it into the PowerPoint linked above (HTML 5 Remote Lab Connection PowerPoint). We have also included a column that you can use to fill in student computer assignments from your roster.

HTML 5 Connection Info			Host Computer Info			Assigned to
User ID	Connection Name	Password	Host Computer	Account	Password
